SUMMARY:

I like to make things. I'm a self-taught web designer and developer and student at the University of Wisconsin-Madison. I mainly work with HTML, CSS, and Javascript, but also know my way around PHP, Python, Java, and a few others. I spend most of my time making things for no particular reason, like this resume generator. I don't even need a resume, I was just bored. I have also created apps for iOS, Android, Windows 8, and basically any device or operating system you can think of - I even made an app for the Zune HD. I want to use up some more space but I'm out of things to say, so I'm going to extend this sentence as long as I can by explaining how I'm extending this sentence like I'm doing right now.

EXPERIENCE

Export Abroad   ●   Madison, WI   ●   July 2014 - Present

Export Abroad is a big data platform that breaks down the barriers of exporting. They apply predictive analysis to identify the best global opportunities for any product, anywhere in the world.

Front End Engineer

I'm really bad at writing job descriptions, so I'll keep this simple and stupid, because this is just an example of what a resume would look like and I'm not actually going to use it. Anyway, I am the front end engineer for Export Abroad. I create the websites for them - including the main site at exportabroad.com, the blog at blog.exportabroad.com, as well as the web app that is not yet released.

Responsibilities include:

- Working, because that's what people do at jobs.
- Creating websites using HTML, JS, and CSS
- Figuring out ways to actually make things work how they should
- I need one more bullet point

EDUCATION

BACHELOR OF SCIENCE IN LIFE SCIENCES COMMUNICATION

University of Wisconsin-Madison ● Madison, WI ● 2017
